Docket No. 23,369-154

Filed:

For: Stents with Proximal and Distal End Elevations

STATEMENT REGARDING DIVISIONAL APPLICATION

Mail Stop Patent Application
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Applicant requests examination of the enclosed specification, claims, abstract and drawings of the application submitted in the form preferred for publication. The enclosed application incorporates the following amendments of the prior application:

In the Specification:

On pages 1 and 19, the title is changed from "Stent and Method of Manufacturing Same" in the original application, to --Stents with Proximal and Distal End Elevations--.

Also on page 1, after the first full paragraph, the following additional paragraph is inserted:

This is a divisional of copending prior application Serial No. 09/874,609, filed June 5, 2001 as a divisional of application Serial No. 09/431,988 (now U.S. Patent No. 6,240,978), filed November 2, 1999 as a divisional of application Serial No. 08/993,033 (now U.S. Patent No. 5,993,483), filed December 18, 1997.

On several pages in the specification, the word “pattern” or “patterns” is inserted to further clarify the distinction between individual elevations, and patterns formed by the elevations. The additions occur at the following locations: page 4 at lines 16 and 17; page 6 at line 17; page 7 at lines 16, 18 and 25; and page 8 at lines 19, 21, 26 and 28.

On page 6 at line 19, a reference character is changed from “3” to --2-- for consistency with the drawings, particularly Figure 1.

On page 6 beginning at line 1, the specification is amended to introduce new drawing figures 6 and 7.

Finally, amendments on pages 3-5 and 7-8 are intended to correct grammatical and typographical errors.

On page 8 beginning at line 1, a paragraph is inserted to briefly describe figures 6 and 7.

In the Claims:

Claims 1-15 are cancelled.

Claims 16-76 are added.

In the Drawings:

The first two sheets of drawings are the same as those submitted in the original application. A third sheet (Figure 6) is the same as that added to the prior application. A fourth sheet shows new Figure 7.

REMARKS

It is respectfully submitted that additional drawing figures 6 and 7, and the additional text relating to these figures, do not add new matter. With reference to the enclosed specification, the last paragraph on page 3 (beginning at line 27) refers to a more dense distribution of the elevations at the proximal and distal ends of the stent. Further, the specification on page 7, beginning at line 11, refers to providing an annular pattern of elevations 12 near the proximal and distal ends 4 and 5 of the stent, to reduce the debraiding tendency of the wires. It is submitted that this fully supports drawing figures 6 and 7, and the accompanying text briefly describing these figures.

Consideration of claims 16-76 on the merits is respectfully requested.

Respectfully submitted,

Boston Scientific Scimed, Inc. (f/k/a Schneider (USA)
